21st CENTURY
TECHNOLOGY

Solve Hard Water Problems Today!

Eliminates scale build-up • Works with any type of pipe • Ideal for water heaters (including tankless models)
Economical to operate • No plumbing or maintenance

The ClearWave® is a revolutionary new product that works without salt, chemicals or plumbing. The ClearWave dissolves existing scale and helps prevent new scale from forming. It uses microprocessor technology to electronically generate inaudible waveforms which help keep calcium carbonate particles (scale) dissolved in water. This ClearWave treated water continues to dissolve scale as it flows downstream. Over time, the ClearWave helps solve hard water problems in the entire system, including pipes (except lead), water heaters, shower heads and appliances. If iron is present in the water supply, use an iron filter prior to the ClearWave.

- No salt or chemicals required
- Use less soap and detergent
- Appliances operate more efficiently without scale build-up
- Easy installation
- No tools required
- Installs in 5 minutes without plumbing
- Maintenance free
- Ideal for water heaters (including tankless models)
