DESCRIPTION

The EvenAir® Whole House Comfort Control System works with the heating and cooling appliances to bring temperature balance to the home. EvenAir® system thermostat monitors the sleeping area and living area temperatures. The comfort control automatically adjusts the system airflow. Uniform air delivery balances temperatures for a comfortable home.

The EvenAir® installation is simple. An EvenAir® system thermostat is installed where existing thermostat is located. A temperature sensor is installed in the sleeping area. Area Comfort Dampers that control the airflow to the sleeping area and living area will be installed in the ductwork.

FEATURES

- Every two minutes during a heating or cooling call an adjustment to the airflow will be made if the living and sleeping area temperatures differ by 2°F or more.
- The EvenAir thermostat continues to automatically adjust airflow to find the right distribution for heating or cooling airflow to keep the living and sleeping area comfortable.
- At night the thermostat uses the temperature sensors in the sleeping area to control heating and cooling calls, just as if the thermostat was moved upstairs to the sleeping area.
- Airflow Override Feature allows up to 3 hours of directed airflow to living area for special gatherings
- Thermostat provides a large, bright, touch, LCD display
- WiFi version thermostat is directly interchangeable with standard thermostat
- LED lights on damper to indicate open and close positions
- Plug & Play Modulating Damper operation
- Hidden key protected Installer options
- Separate USER/Homeowner options
- Advanced HVAC system DS/BK/ODD/DHUM Home Dehumidification Control

BENEFITS

- Energy Saving during Night Time Hours
- Standard multi-size dampers available for every installation
- HERS Testing: same as traditional single-thermostat installation
- Requires only one airflow test as compared to zoning testing
- No BYPASS damper required. No energy wasted.
- Lower cost of installation:
 - o No zoning panel required.
 - o No discharge air sensor.
 - o No bypass duct and damper.
 - o No barometric damper.
 - o Less wires. Uses standard 5 wire between thermostat and air handler.

OPTIONAL ACCESSORIES

- Fresh Air Damper (FAD) or HRV/ERV products to meet ASHRAE 62.2 Ventilation Requirements
- Whole House Economizer System (3 Damper) or Whole House Fan (VentCool)
- Home Humidification (S2000/S2020) System
- Remote Control Temperature Sensor (TSRC)
- Wireless Temperature Sensors (TSER) requires Electronic Receiver Module (ER1) installed

APPLICATION

Field Controls LLC reserves the right to modify a product, without prior notice, whether in design, color or specifications, in order to offer at all times a quality product that is highly competitive. Please consult your national and local building codes to find out whether the installation of electrical products requires the services of a certified technician or electrician. Field Controls and VentCool™ are registered Trademarks used under license by Field Controls LLC. All rights reserved.
