

Wiring Hub

The EvenAir® Wiring Hub is installed in the equipment area and communicates with the EvenAir® communicating thermostat using RS485 and a 4-wire new or existing cable. The Wiring Hub can use wired temperature sensors in the sleeping area for RNC installations or wireless, battery powered temperature sensors for replacement installations. Plug and play dampers are used for fast, error free installation.

- Connects to the T32 or T32WF thermostat using existing or new 4-conductor thermostat cable.
- Compatible with gas/electric equipment with 2H/2C, conventional or dual fuel heat pumps with 3H/2C.
- Use wired temperature sensor(s) in sleeping area for RNC installations.
- Use wireless, battery powered temperature sensor(s) in sleeping area for replacement installations.
- Outdoor temperature sensor is installed when dual fuel heat pumps are used or for inhibiting ventilation in extreme conditions.
- Size - 5.50 x 3.90 x 1.20 in.
- 5-Year Warranty.

Premium Whole House Comfort

Provide true Whole House Comfort by integrating whole house fan control, fresh air control and humidity control into the EvenAir® Whole House Comfort Control System.

- Whole House Fan Control brings in cool air using a 1 to 12 hour timer set at the thermostat or by true temperature control.
- Fresh Air Control for a healthy home that meets ASHRAE 62.2 requirements.
- Humidity Control for a comfortable home during the heating and cooling season.
