THE FASTEST HOME AUTOMATION SOLUTION

The SmartExhaust™ switch is the easiest, most cost efficient way to help make a home ASHRAE 62.2 compliant. The SmartExhaust turns the bathroom fan into an automatic exhaust system that helps eliminate stale air from the home. The switch uses microprocessor technology to provide precise ventilation times for bathroom fans. The bathroom fan runs every hour for a set ventilation period and controls both the bathroom fan and light. The SmartExhaust also helps prevent mold and mildew.

HOW IT WORKS

The SmartExhaust is set to automatically turn the fan on once per hour for a set amount out time (1-60 minutes). While running, the SmartExhaust is sending stale air outside. The stale air is replaced by fresh air. When the fan is turned on manually, the SmartExhaust automatically counts that time used and deducts it from the amount scheduled for that hour.

There are two settings on the SmartExhaust switch - Ventilation and Delay. Ventilation is the number of minutes per hour that you want the fan to operate. Delay is the number of minutes you want the fan to run after the bathroom light has been turned off. The delay time provides additional run time of the fan to complete ventilation of the bathroom after use. To disable the automatic delay run, simply turn the fan off, on, then off again.

BENEFITS:

- Reduces moisture buildup in the bathroom and prevents mold and mildew from forming
- Helps eliminate odors
- Complies with ASHRAE 62.2 ventilation standard
- Controls the bathroom fan and light all in one switch
